EDUCATION

MS in Computer Science [GPA 4/4] *Expected 2024*
University of Colorado, Boulder, United States

MS (Research) in Computational Linguistics [GPA 8.25/10] *2022*
IIIT Hyderabad, India

- Member of the **Gender Sensitization Committee**.

BTech (Honors) in Computer Science *2019*
IIIT Hyderabad, India

- Recipient of the **Dean's List Scholarship**.
- Head Coordinator of the **Music Club**.

TECHNICAL SKILLS

Programming Languages: Python, C, C++, Javascript
Web Tech: HTML, CSS, FastAPI, Flask
Libraries and Packages: PyTorch, NumPy, Sklearn, spaCy, Keras, Tensorflow
Data Warehousing: SQL, Elasticsearch
Cloud Platforms: Amazon Web Services, Google Cloud Platform
Miscellaneous: GNU-Linux, Windows, Git, LaTeX, Arduino

EXPERIENCE

Research Assistant, Science of Science & Computational Discovery Lab (University of Colorado, Boulder, United States) *2022 - Present*

- Currently exploring applications of **recommendation systems** and **graph neural networks** for assisting scientific research.

Research Engineer - ML and NLP, SentiSum (London, United Kingdom) *2021 - 2022*

- Developed systems for **text classification**, **textual anomaly detection** and **unsupervised information extraction**.
- Made a **3x improvement** to **translation** throughput and improved translation performance by shifting away from online translation services to bespoke, in-house systems.
- **Scaled** and **parallelized** deep learning based natural language processing systems for efficient inference on production loads.
- Employed **cloud platforms** such as **AWS** and **GCP** to **serve live** machine learning models to clients for inference and for use in downstream tasks.

Research Assistant, Language Technologies Research Center (IIIT Hyderabad, India) *2017 - 2022*

- Researched automated **identification of political bias** in news, using a mix of hand crafted linguistic features and deep neural networks.
- Researched efficient, low-resource NLP methods for **sentiment analysis** and **sequence generation** in codemixed languages.
- **Optimized large language models** to be efficient in terms of both data and compute, and trained them in a multilingual setting.

Data Engineering Intern, Rakshak Project - AI for Medicine (IIIT Hyderabad, India) *2020 - 2021*

- Built a data pipeline with **REST APIs** on an **Elasticsearch** and **SQL** backend, in collaboration with Intel Labs and the Government of India, spanning multispecialty hospitals nationwide to democratize medical data for AI and medical research.

Research Intern, ICAR CNR (University of Calabria, Italy) *2019 - 2020*

- Explored deep learning for recommendation systems through **memory**, **capsule** and **graph neural networks**.

Teaching Assistant, CL1.101 Introduction to Linguistics (IIIT Hyderabad, India) *2019 - 2019*

- Conducted tutorials, and set/graded assignments and test papers for the undergrad STEM course.

PROJECTS

Publication: TLDR for CODWOE, SemEval Workshop 2022 (aclanthology.org/2022.semeval-1.6) *July 2022*

- Achieved **first place** on the definition modeling subtask and attained competitive scores on the embedding generation subtask.
- Augmented the transformer architecture and explored techniques such as **unsupervised pretraining**, **multitask learning** and **contrastive learning**.
- Published "**TLDR: Transformers for Learning Dictionaries and their Representations**" at the CODWOE NLU shared task in the SemEval Workshop 2022, NAACL.

Personal Project: HF-Trim (github.com/IamAdiSri/hf-trim) *July 2022*

- Created a python package for trimming the vocabulary on pretrained HuggingFace models, **lowering memory requirements** of models at **minimal cost to performance**.
- Employed in both research and production environments, with over **2k downloads**.
- **Actively maintained** on GitHub and hosted on the Python Packaging Index.

Publication: HCMS for SentiMix, SemEval Workshop 2020 (aclanthology.org/2020.semeval-1.167) *December 2020*

- Designed a multilevel neural architecture, employing **CNNs** and **self-attention** to perform sentiment analysis in a low-resource, codemixed language setting.
- Published "**HCMS: A Neural Approach to Sentiment Analysis for CodeMixed Texts**" at the SemEval Workshop 2020, ACL.

Research Project: Collaborative Memory Networks for Recommendation Systems (github.com/IamAdiSri/cmn4recosys) *June 2019*

- Ported the architecture detailed in the "Collaborative Memory Networks for Recommendation Systems" paper by Ebesu et al. from **Tensorflow** to **PyTorch**.

ACHIEVEMENTS

- Ranked **8th and 11th globally** in the Labor and SCRBL challenges respectively at AIcrowd, a Kaggle-like competitive ML platform.
- **Winner** of the Howzhack 2019, India's biggest online hackathon.
- **Winner** of the Megathon 2018, a national university-level hackathon.
